

Introduction

This document analyses a data set from CamCORS, covering all supervision reports created (including those unsubmitted, unapproved, and rejected) from Michaelmas 2016 to partway through Lent 2022. Supervision hours are calculated as the number of hours given for a student, divided by the group size the supervisions were given in, to remove duplication:

1. High volume supervisors

A table listing anonymised supervisors who have given exceptionally high numbers of supervision hours per year across 2016-22.

2. Scale of high volume

A table and pie-chart showing the number of supervisors giving certain volumes of supervision hours per year, by academic year. Volumes are divided into quantities of 50. 201-250 hours a year contains the limit of how much paid work a research student may undertake, and the typical amount of work for a CTO. Providing greater than 400 hours of supervisions a year would approximately generate enough income to start paying Income Tax.

3. No. of Colleges supervised

A table and pie-chart showing how many Colleges supervisors work for per academic year.

4. Volume against College no.

Two bar charts, comparing the volume of supervision hours given against the number of Colleges supervised for per year across 2016-22.

4a. - e.

Tables breaking down the data presented in **4.**, for each number of Colleges a supervisor worked for.

5. Supervisions by volume

Tables and a pie-chart showing the total number of supervision hours given each academic year, by the volumes of work supervisors have provided in a year.

6. Supervisors by type

Bar graphs showing volumes of supervision hours given on average by supervisor type. Supervisor type is self-reported on CamCORS, chosen from a narrow range of options, so **caution should be given to the accuracy of this data.**

7. New supervisors each year

A table showing the registration of new supervisors to CamCORS each academic year, by supervisor type. As above, **caution should be given to the accuracy of this data.**

1. High volume supervisors

The % of new supervisors each academic year by supervisor type, on average (2016-2021)

Supervisor type is self-reported on CamCORS, chosen from a narrow range of options, so caution should be given to the accuracy of this data.

On average more than 1/2 of new supervisors each year will be postgraduates (660), more than 2/3 will be postgraduates and researchers (900).
